# 2021 Scorecard Management Discussion and Analysis ("2021 Scorecard MD&A")

The link below provides a document titled "Scorecard - Performance Measure Descriptions" that has the technical definition, plain language description and how the measure may be compared for each of the Scorecard's measures in the 2021 Scorecard MD&A: <a href="http://www.ontarioenergyboard.ca/OEB/">http://www.ontarioenergyboard.ca/OEB/</a> Documents/scorecard/Scorecard Performance Measure Descriptions.pdf

### Scorecard MD&A - General Overview

- In 2021, API continued to meet or exceed the majority of its performance targets.
- In 2022, API expects to continue to improve its overall scorecard performance results. These performance improvements are expected
  as a result of enhanced system reliability due to API's investment in its distribution system and continued responsiveness to customer
  feedback.

# **Service Quality**

• New Residential/Small Business Services Connected on Time

In 2021, API connected 100% of the 264 new eligible low-voltage residential and small business customers within the Ontario Energy Board's prescribed five-day timeline. Since 2011, API has consistently exceeded the Ontario Energy Board's target of 90%.

Scheduled Appointments Met On Time

In 2021, API met 100% of its 220 appointments within the prescribed timelines set out by the Ontario Energy Board. Since 2013, API has consistently attended 100% of its schedule appointments on time.

Telephone Calls Answered On Time

In 2021, customer service representatives answered 88.4% of API's 11,705 calls within 30 seconds. This exceeds the Ontario Energy Board's mandated 65% target. Longer call processing times due to the complexity of customer calls are affecting the call answering statistics. API continues to offer and promote self-serve options and utilizes social media to engage and inform customers in an effort

2021 Scorecard MD&A Page 1 of 7

to offer customers additional channels to interact with the Company.

### **Customer Satisfaction**

#### First Contact Resolution

API measured First Contact Resolution by tracking the number of escalated calls as a percentage of total calls taken by the customer service center. In 2021, only 0.04% of calls were escalated.

#### Billing Accuracy

For 2021, API issued approximately 148,892 invoices and 99.82% were accurate. This is above the industry standard of 98%.

### Customer Satisfaction Survey Results

API conducts its customer satisfaction surveys through a third-party survey provider, UtilityPULSE, consistent with many other LDCs in the province. Phone numbers were randomly selected so that 85 per cent of the interviews were conducted with residential customers and 15 per cent with general service customers. The 2021 satisfaction score was 93%, which is the Ontario benchmark.

The survey provides useful information to better meet the needs of API's customers and is incorporated into API's distribution system plan, capital planning and overall company objectives.

# Safety

## Public Safety

### Component A – Public Awareness of Electrical Safety

In 2020, UtilityPulse was also engaged to complete surveys in relation to "Public Awareness of Electrical Safety". On completion of this survey, UtilityPulse generated a "Public Safety Awareness Index Score" for API and other LDC's. Province-wide scores ranged from 80% to 85%, with both average and median Index Scores of 83%. API's score of 83% suggests that members of the public are generally well-informed about the safety hazards associated with electrical distribution systems, but also that further education and engagement would be beneficial. This survey on "Public Awareness of Electrical Safety" is completed on a two-year cycle and will be completed again by API in 2022.

2021 Scorecard MD&A Page 2 of 7

#### Component B – Compliance with Ontario Regulation 22/04

This component includes the results of an Annual Audit, Declaration of Compliance, Due Diligence Inspections, Public Safety Concerns and Compliance Investigations. All the elements are evaluated as a whole and determine the status of compliance (Non-Compliant, Needs Improvement, or Compliant).

Based on results provided by ESA, API's status for 2021 is Compliant.

### Component C – Serious Electrical Incident Index

"Serious electrical incidents", as defined by Regulation 22/04, make up Component C. The metric details the number of and rate of "serious electrical incidents" occurring on a distributor's assets and is normalized per 10, 100 or 1,000 km of line (10km for total lines under 100km, 1000km for total lines over 1000km, and 100km for all the others).

Based on results provided by ESA, API had zero incidents in 2021.

# **System Reliability**

### • Average Number of Hours that Power to a Customer is Interrupted

API's customers experienced a decrease in the average duration of electrical service disruptions in 2021 compared to 2020. The 2021 result is 49% better than the OEB's performance target for API.

The average number of hours that power to a customer is interrupted, which are adjusted for Loss of Supply and Major Event Days, shows a decreasing trend. This indicates a general improvement in reliability for items within API's control. The four main outage causes in API's service area are Tree Contacts, Loss of Supply, Scheduled Outages and Defective Equipment.

API continues to invest in grid modernization in order to gain visibility on the state of the distribution system and improve overall response and restoration times. Grid modernization initiatives include the deployment of automated devices and implementation of an outage management system. API understands that reliability of electrical service is a high priority for its customers and continues to invest in replacement of end-of-life assets as well as vegetation management.

## • Average Number of Times that Power to a Customer is Interrupted

2021 Scorecard MD&A Page 3 of 7

API's customers experienced a decrease in the average number of electrical service disruptions in 2021 as compared to 2020, the result is 44% under the OEB's performance target of 3.16, and shows an improving trend over the most recent five-year period.

API has deployed several initiatives aimed at reducing the number of electrical service interruptions such as the vegetation management program and cyclical asset preventative maintenance programs.

API reviews outage statistics on a monthly basis to identify areas of poor distribution system performance. This process indicates any trends in poor performance and identifies opportunities to improve reliability. API also completes asset condition assessments to identify assets that present a risk of impacting system reliability. API uses reliability indicators and asset condition assessment data as key drivers into the system planning process.

## **Asset Management**

### • Distribution System Plan Implementation Progress

In 2021, API exceeded its overall DSP capital plan spend, mostly due to the continued increase in customer and third-party driven requests, such as those from telecommunications companies and municipal corporations. API will continue to invest in this area as needed in order to provide customers access to electricity services and to ensure ongoing collaboration with third-party entities completing work in our service territory. As part of our System Renewal budget, API completed the construction of the new Dubreuilville DS (previously deferred) as well as 95% of it's planned line rebuild sustainment program. API achieved its System Service plan, which was mainly focused on executing the agreement necessary for the construction and installation of a second transformer at the Echo River TS. (which will provide a significant increase in supply reliability for approximately 6000 API customers East of Sault Ste. Marie). API also began the construction of the new Sault Facility as part of its planned General plant budget, which will continue in 2022. Industry supply chain challenges resulted in procurement delays in our Fleet replacement plan.

2021 Scorecard MD&A Page 4 of 7

### **Cost Control**

#### • Efficiency Assessment

The total costs for Ontario local electricity distribution companies are evaluated by the Pacific Economics Group LLC on behalf of the Ontario Energy Board to produce a single efficiency ranking. The electricity distributors are divided into five groups based on the magnitude of the difference between their respective individual actual and predicted costs. In reviewing the Pacific Economics Group benchmarking and report, API management does not believe that the model accurately predicts API's costs. API's unique attributes as a rural distributor, particularly its low customer density, result in API being an extreme outlier in the data set used to develop the model.

Some of API's largest cost drivers, including customer density and the degree of forestation along its distribution line rights of way, are not appropriately reflected in the benchmarking model. As a result of the extremely rural and low-density nature of API's system in relation to other Ontario distributors, API management believes that the total cost per km of line section below provides a more appropriate measure of API's efficiency and cost control.

### Total Cost per Customer

The statistical model developed by Pacific Economics Group produces total capital and operating costs for each distributor that can be used for the purpose of comparing distributors. This amount is then divided by the total number of customers that API serves to determine Total Cost per Customer. The cost performance result for 2021 is \$2,338 per customer which is a 5.7% increase over 2020.

Over the 2017 to 2021 period covered by the scorecard, API faced both inflationary cost increases, as well as cost increases associated with investments in programs for asset replacement, system improvement, and vegetation management that are sustainable in the long term. From 2017 to 2021, API's total customer count has not grown substantially (11,724 in 2017 vs. 12,227 in 2021), with a result that cost increases are not offset by customer growth.

### Total Cost per Km of Line

This measure uses the same total cost that is used in the Cost per Customer calculation above. The total cost is divided by the kilometers of line that API operates to serve its customers. API's 2021 result is \$13,025 per km of line. This decrease is due to changes in OEB reporting requirements used to calculate this parameter. In 2019, API started reporting on the length of its low-voltage secondary lines, in addition to the length or higher-voltage primary lines reported in prior years. This increased the total line length used in the calculation from 1,849 km in 2018, to 2,166 km in 2019.

Many of API's significant cost drivers are directly related to its total kilometers of line. These cost drivers include most lines and vegetation management related activities, as well as support functions such as engineering and design. As discussed in the Efficiency Assessment

2021 Scorecard MD&A Page 5 of 7

section above, API management believes that total cost per km of line is a more accurate assessment of API's cost efficiency than the other measures discussed above.

### **Financial Ratios**

## • Liquidity: Current Ratio (Current Assets/Current Liabilities)

The 2021 liquidity current ratio for API is 0.43 (2020 - 0.77). The liquidity ratio has not significantly changed from prior year. The 2021 liquidity current ratio based on API's audited financial statements, adjusted to exclude due to related parties, is 0.75 (2020 1.31), which varied from last year primarily due to accruals at year end for several large ongoing capital projects. Going forward, the liquidity ratio is expected to be maintained at a level greater than 1, indicating that API can pay its short term debts and financial obligations.

### • Leverage: Total Debt (includes short-term and long-term debt) to Equity Ratio

The Ontario Energy Board uses a deemed capital structure of 60% debt, 40% equity for electricity distributors when establishing rates. This deemed capital mix is equal to a debt to equity ratio of 1.5. The combined 2021 debt to equity ratio for API is 1.32 (2020 - 1.30), which has not significantly changed from prior year. The 2021 debt to equity ratio based on API's audited financial statements, adjusted to include due to related parties, is 1.48 (2020 - 1.38). The leverage ratio is expected to be maintained at a level near the 1.5 deemed capital mix noted above.

### • Profitability: Regulatory Return on Equity – Deemed (included in rates)

API's 2021 distribution rates were approved by the Ontario Energy Board as part of its 4th Generation Incentive Rate-Setting application. API's last Cost of Service application was for rates effective January 1, 2020 and this included an expected (deemed) regulatory return on equity of 8.52%. The Ontario Energy Board allows a distributor to earn within +/- 3% of the expected return on equity.

### Profitability: Regulatory Return on Equity – Achieved

API's return achieved in 2021 is 9.38% (2020 - 9.25%), which is within the +/- 3% range allowed by the Ontario Energy Board. API achieved returns are higher in 2021 as compared to 2020 due to a \$0.1 million (3.0%) increase in adjusted regulated net income and a \$2.3 million (2.0%) increase in rate base.

# Note to Readers of 2020 Scorecard MD&A

The information provided by distributors on their future performance (or what can be construed as forward-looking information) may

2021 Scorecard MD&A Page 6 of 7

be subject to a number of risks, uncertainties and other factors that may cause actual events, conditions or results to differ materially from historical results or those contemplated by the distributor regarding their future performance. Some of the factors that could cause such differences include legislative or regulatory developments, financial market conditions, general economic conditions and the weather. For these reasons, the information on future performance is intended to be management's best judgement on the reporting date of the performance scorecard, and could be markedly different in the future.

2021 Scorecard MD&A Page 7 of 7
